AMENDMENTS TO THE CLAIMS

In the claims, please amend claims 5, 7, 12, and 16, and add new claims 21 and 22 as follows:

- 1-4. (canceled)
- 5. (currently amended) A process for delivering a polynucleotide to the cytoplasm of a cell in vitro consisting essentially of:
 - a) forming a styrene-maleic anhydride random copolymer;
 - b) covalently linking hydrophobic groups to reacting hydrophobic amines or hydrophobic alcohols with anhydride monomers in the copolymer thereby forming a membrane active polymer capable of lysing mammalian cell membranes at pH 6.5; and
 - c) contacting said cell with said polynucleotide and said membrane active polymer such that the compound and the polymer are endocytosed by the cell.
- 6. (canceled)
- 7. (currently amended) The process of claim 5 wherein the hydrophobic groups are selected from the list consisting of: hydrophobic esters and hydrophobic amides amines consist of alkyl amines.
- 8. (previously presented) The process of claim 7 wherein a functional group is covalently linked to an anhydride monomer in the polymer.
- 9-11. (canceled)
- 12. (currently amended) A process for delivering a polynucleotide to the cytoplasm of a cell in vitro consisting essentially of:
 - a) forming a butyl vinyl ether-maleic anhydride alternating copolymer;
 - b) eovalently linking hydrophobic groups to reacting hydrophobic amines or hydrophobic alcohols with anhydride monomers in the copolymer thereby forming a membrane active polymer capable of lysing mammalian cell membranes at pH 6.5; and
 - c) contacting said cell with said polynucleotide and said membrane active polymer such that the compound and the polymer are endocytosed by the cell.
- 13.-15. (canceled)
- 16. (currently amended) The process of claim 12 wherein the hydrophobic groups are selected from the list consisting of: hydrophobic esters and hydrophobic amides amines consist of alkyl amines.

Appl. No. 10/765,668 Amdt. dated 10/09/2007

Reply to Office action of 07/26/2007

17. (previously presented) The process of claim 12 wherein a functional group is covalently linked to an anhydride monomer in the polymer.

18-20. (canceled)

- 21. (new) The process of claim 8 wherein the functional group is selected from the group consisting of: targeting groups, steric stabilizers, membrane active compounds, and reactive groups.
- 22. (new) The process of claim 17 wherein the functional group is selected from the group consisting of: targeting groups, steric stabilizers, membrane active compounds, and reactive groups.

If there are any questions or concerns, please contact the undersigned.

Respectfully submitted,

/Kirk Ekena/
